- deploying ipv6 in 3gpp networks evolving mobile broadband
from 2g to lte and beyond a practical guide enabling mobile
operators to deploy ipv6 with confidence the most widely used
cellular mobile broadband network technology is based on the
3gpp standards the history and background of the 3gpp
technology is in the global mobile service gsm technology and
the work done in european telecommunications standards
institute etsi this primary voice service network has evolved to
be the dominant mobile internet access technology deploying
ipv6 in 3gpp networks covers how internet protocol version 6
ipv6 is currently defined in the industry standards for cellular
mobile broadband why and how this route was taken in the
technology and what is the current reality of the deployment
furthermore it offers the authors views on how some possible
ipv6 related advances 3gpp networks may be improved during
the coming years it gives guidance how to implement and
deploy ipv6 correctly in the third generation partnership project
3gpp mobile broadband environment and what issues one may
face when doing so the book covers 3gpp technologies from 2g
to lte and offers some ideas for the future key features written
by highly respected and experienced authors from the ipv6
mobile world provides an explanation of the technical
background for some not-so-obvious design choices what to
concentrate on and what transition strategies should be used by
the vendors and the operators offers a useful reference guide
